INT. J. CONTROL, 1996, VOL. 63, NO. 6, 1179–1181

SUBJECT INDEX (Vol. 63)

Actuator failure detection and identification, on-line learning neural architectures and cross correlation analysis, 433
Aircraft pitch-axis models, nonlinear, dynamic inversion control laws application, stability, 1
Algorithm
  minimal control synthesis type, passivity-based analysis, 67
  state-set estimation type, for linear systems in the presence of bounded disturbances, 799

Bilinear systems, parameter identification, strong consistency and convergence rate, 907

Chaotic systems identification using smoothing data with local instabilities, 483
Control
  adaptive
    for time optimal tracking systems, 951
    minimum variance, generalized, and parameter convergence, for stochastic systems, 147
    of a class of time-delay systems with uncertain parameters, 937
  adaptive motion tracking type, of robot manipulators, non-regressor based approach, 41
  decentralized, of large-scale power systems with unknown interconnections, 591
  discrete time, optimal, of nonlinear systems, dynamic integrated system optimization and parameter estimation, 257
  feedback type, of two-time-scale nonlinear systems, 965
  H_∞ problem, with zeros on boundary of stability domain, 1029
  H_∞-type, with output feedback, for time-varying discrete systems, 1167
  nonlinear model predictive type, continuous-time formulation, 121
  of incompletely described sequential machines, 1005
  of mobile robots, sliding mode type, tracking the gradient of artificial potential, 417
  of nonlinear distributed parameter systems, use of symmetry groups in sliding mode control, 1149
  of non-minimum phase singularly perturbed systems, application to flexible-link manipulators, 679
  of systems with parameter uncertainty, output feedback H_∞ type, 741
  of the linear wave equation, optimal, 833
  robust digital tracking with perturbation estimation via the Euler operator, 239
  state-space supervisory type, of reconfigurable discrete event systems, 767
  synthesis algorithm, minimal passivity-based analysis, 67
Control engineering, history, bibliography of secondary sources, update 1995, 995
Control systems
  mechanical, non-holonomic, H^∞ model reference tracking design, 283
  MIMO type, literal Nyquist stability criterion, 55
  sliding mode type, genetic algorithm automated approach, 721
Controller
  fuzzy, hierarchical, multivariable, for learning with genetic algorithms, 865
  structure of two-degree-of-freedom H_∞ loop shaping, 1105
  structured singular value type, synthesis using constant D-scales without D-K iteration, 813
Controller design for partial decoupling of linear multivariable systems, 535
Controllers, multivariable, H_∞ types and generalized LQG, 507

Design
  H^∞ model reference tracking type, for non-holonomic mechanical control systems, 283
  of a static reactive power compensator using fuzzy sliding mode control, 393
  of controller, for partial decoupling of linear multivariable systems, 535
  of LQI servo system, two-degree-of-freedom design method, disturbance rejection by constant state feedback, 703
  of redundancy relations for failure detection and isolation by constrained optimization, 609
  of robust control, attenuation of nonlinearly state-dependent uncertainties, application to robotic manipulators, 27
  of sliding mode control systems, genetic algorithm automated approach, 721
  of unknown input observers and robust fault detection filters, 85
Digital tracking, robust, with perturbation estimation via the Euler operator, 239
Discrete non-unit memory linear repetitive processes, stability, 2D systems interpretation, 457

Failure detection and isolation by constrained optimization, redundancy relations design, 609
Feedback control of two-time-scale nonlinear systems, 965
Feedback representation of precompensators
  application to decoupling linear multi-input multi-output plants, 207
  general case, 195
Filtering, optimal, robust, with time-varying parameter uncertainty, 557

Filters
  H_∞ optimal multichannel linear deconvolution type, 519
  robust fault detection type, design, 85
Fuzzy controller, hierarchical, multivariable, for learning with genetic algorithms, 865
Fuzzy sliding mode control design of static reactive power compensator, 393

Gain optimization under control structure and stability region constraints, 849

H_∞ control problem with zeros on boundary of stability domain, 1029
H_∞-control with output feedback for time-varying discrete systems, 1167
H_∞ loop shaping controller, two-degree-of-freedom type, structure, 1105
H^∞ model reference tracking design, robust, for non-holonomic mechanical control systems, 283
H_∞ multivariable controllers and generalized LQG, 507
H_∞ norm computation for LTV systems using nonlinear optimal control algorithms, 161
H_∞ optimal multichannel linear deconvolution filters, predictors and smoothers, 519
Hammerstein systems, MIMO type, identification in the context of subspace model identification methods, 331
Hermitian solutions of the discrete-time algebraic Riccati equation, 921
History of control engineering, bibliography of secondary sources, update 1955, 995

Identification of MIMO Hammerstein systems in the context of subspace model methods, 331
Information forgetting, recursive, with augmented UD identification, 623
Interconnected systems, robust adaptive stabilization under structured nonlinear perturbations, 183

Learning neural architectures, on-line, cross-correlation analysis, for actuator failure detection and identification, 433
Linear quadratic regulator loop shaping for high frequency compensation, 1055
Linear systems in the presence of bounded disturbances, state-set estimation algorithm, 799
LQG, generalized, and H_∞ multivariable controllers, 507
LTV systems, H_∞ norm computation using nonlinear optimal control algorithms, 161

Machines, sequential, incompletely described, control, 1005
Manipulators, with flexible links, control, 679
MIMO control systems, literal Nyquist stability criterion, 55
MIMO plants, linear, decoupling using feedback precompensation, 207
Missiles, unstable bank-to-turn type, with saturating actuators, performance enhancement methods, 641
Model predictive control, nonlinear, continuous-time formulation, 121
Modelling, an analysis of sub-rate control systems, 365
Models
  nonlinear polynomial ARMA type, stability, also of inverse models, 885
  of aircraft pitch-axis, nonlinear, stability of dynamic inversion laws, application, 1
Multivariable stability margin optimization, spectral tangential interpolation approach, 577

Nonlinear distributed parameter systems, use of symmetry groups in sliding mode control, 1149
Nonlinear systems, non-minimal factorization, the observable case, 1069
Non-minimum phase singularly perturbed systems control, 679
Nyquist stability criterion, literal, for MIMO control systems, 55

Observers, unknown input type, design, 85

Parameter convergence for stochastic systems, 147
Parameter estimation for discrete time optimal control, 257
Parameter identification
  bilinear systems, strong consistency and convergence rate, 907
  of robot arm with repetitive control, 225
Periodic systems, linear, decoupling with stability, 751
PI controllability, generalized, 307
Polynomial approach to modelling sub-rate control systems, 365
Power compensator, static reactive type, design using fuzzy sliding mode control, 393
Power systems, large-scale, with unknown interconnections, decentralized control, 591
Precompensators, feedback representation, general case, 195
Predictors, H_∞ optimal multichannel linear deconvolution type, 519

Reconfigurable discrete event systems, state-space supervisory control, 767
Recursive information forgetting with augmented UD identification, 623
Regulator, linear quadratic type, loop shaping for high frequency compensation, 1055
Repetitive processes, linear, discrete, non-unit memory, stability, 2D systems interpretation, 457
Riccati equation, algebraic, discrete-time, hermitian solutions, 921
Robot arm with repetitive control, parameter identification, 225
Robot manipulators
  adaptive motion tracking control, non-regressor based approach, 41
  attenuation of nonlinearly state-dependent uncertainties, robust control design, 27
Robots, mobile, tracking the gradient of artificial potential fields, sliding mode control, 417

Robust adaptive stabilization of a class of systems under structured nonlinear perturbations with application to interconnected systems, 183
Robust digital tracking with perturbation estimation via the Euler operator, 239

Sampling period effect on behaviour of systems incorporating state feedback, 351
Servo system, LQI type, two-degree-of-freedom design method, disturbance rejection by constant state feedback, 703
Sliding mode control design, fuzzy, of static reactive power compensator, 393
Sliding mode control of nonlinear distributed parameter systems. use of symmetry groups, 1149
Smoothers, H_∞ optimal multichannel linear deconvolution type, 519
Smoothing data with local instabilities, identification of chaotic systems, 483
Stability
of discrete non-unit memory linear repetitive processes, 2D systems interpretation, 457
of dynamic inversion control laws applied to nonlinear aircraft pitch-axis models, 1
of nonlinear polynomial ARMA models and their inverse, 885
Stability domain boundary with zeros of the H_∞ control problem, 1029
Stability margin optimization, multivariable, spectral tangential interpolation approach, 577
Stabilization
adaptive, using a variable sampling rate, 107
robust, adaptive, of class of systems under structured nonlinear perturbations, 183
State feedback systems behaviour, sampling period effect, 351
Stochastic systems, generalized minimum variance adaptive control and parameter convergence, 147
Systems, two-dimensional, elementary operations and equivalence, 1129

Time-delay systems with uncertain parameters, adaptive control, 937
Time-optimal tracking systems, adaptive control, 951
Time-varying discrete systems, H_∞-control with output feedback, 1167
Two-time-scale nonlinear systems, feedback control, 965

Uncertain parameter systems, output feedback H_∞ control, 741.
